GETTING STARTED WITH ANIM A KRI

Anim A Kri is the second app of Goodie Yahnz, launched on 26th December, 2024. It is a browser based animation app used to animate with CSS code without code. It uses the “background-image: url()” code to animate, that way it creates a frame by frame animation.

NOTE

Anim A Kri used to have 500 pre-built frames. It had a frame rate of 12.5 fps. But from 1st September, The number of frames and the duration are the user’s choice. This makes it easier to animate and play the videos

FEATURES AND USES

A screenshot of the Anim A Kri application interface. The top bar is yellow and contains the 'File' and 'Animation' menu items. Below the bar is a large white workspace area. In the center of the workspace, the text 'This is Anim A Kri environment' is displayed. At the bottom left of the workspace, the text 'This is Anim A Kri workspace' is displayed.

This is Anim A Kri workspace

THE FILE BUTTON

This opens two tools which are;

New: Which opens a new Anim A Kri file (from the url).

Close: closes the file

THE ANIMATION BUTTON

This is where the magic happens. Click on this button and you will get

Show frames: Shows your frames

Add frames: Opens a pane where you create frames

Speed: Opens a pane where you control the speed/duration

Manage imported images: Here you see the images you imported into your animation

Hide animation: Hides your frames

HOW TO START ANIMATING

Animating in Anim A Kri is very easy especially with the new upgrade

STEP 1: CREATE YOUR FRAME

You add your frame number here and the image url here

And click this button to create the frame

STEP 2: TYPE YOUR DURATION

Type your number here and Click Here

STEP 3: OPEN FRAME PANE AND CLICK PLAY

This is the frame pane

ADD IMAGES URL BETWEEN THE QUOTATIONS

```
@keyframes animation { 0.0% {  
background-image: url(""); } 100.0%  
{ background-image: url(""); }
```

[GET HERE](#)

Just click this play button 

And you'll get your animation for recording.
